The method comprises delivering to the subject a recombinant adeno-associated virus (AAV) comprising a gene encoding a human apolipoprotein E (apoE) or apoA under the control of a regulatory control sequence which directs expression of the gene. The recombinant AAV also comprises a capsid protein selected from an AAV serotype (e.g. AAV7 or AAV8) which preferentially expresses high levels of transgene in live. A therapeutically effective amount of apoE or apoA expression is obtained upon delivery of low dose of AAV. The method of the invention is useful for lowering total cholesterol levels in a subject, e.g. for treating atherosclerosis, and for correcting defects in lipoprotein. The present sequence represents AAV serotype 7 (AAV7), which may be used to produce recombinant AAV vectors of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lowering total cholesterol levels and treating atherosclerosis in a subject comprises delivering a recombinant adeno-associated virus (AAV) comprising an AAV serotype capsid protein or a gene encoding human apolipoprotein E (apoE) or apoA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 7; 69pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Run on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             OM nucleic - nucleic search, using sw model
            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer

Class: viral tagged.
                                                                                 Email: dgmiller@u.washington.edu
AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used

                                                                                                                                                              AAV Vector:Chromosome Junction Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer was used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' prin was used to initiate sequencing reactions."

Files with names differing only by x1 or 1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer was used to initiate sequencing reactions."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /cell_type="Human Primary Fibroblasts"

                  Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  was used to initiate sequencing reactions."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       indicates the 'left'

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Contact: Miller, D.G.

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Department of Pediatrics

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Department of Pediatrics

                                                                                                                                                   Conservative
                                                                                                                                                                                                                                             Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' prin was used to initiate sequencing reactions."

                                                                                                                                                                                                                                                          Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' prin was used to initiate sequencing reactions."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer was used to initiate sequencing reactions."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /clone lib="Adeno-Associated Virus Vector Integration

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
to initiate sequencing reactions.
Seq primer: right, 5'-AFCACGAGGCCCTTTCGTCTTCAAG
Class: viral tagged.
